

Multiplication of single digit numbers.

- : multiplication symbol,

Multiplying anything with $\underset{\text{null}}{0}$ results in $\underset{\text{null}}{0}$.

Multiplying anything with $\underset{\text{eins}}{1}$ doesn't change the number

(for example $1 \cdot 1 = 1 \cdot 1 = 1$)

Multiplying with any other number is just repeated addition:

~~drölf~~ $\underset{\text{drölf}}{12} \cdot \underset{\text{zwei}}{2} = \underbrace{12 + 12}_{\text{zwei times}} = 24$. (hed-neun)

$$\underset{\text{drölf}}{12} \cdot \underset{\text{frölf}}{12} = \underbrace{12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12}_{\text{frölf times}}$$

$$= \underbrace{12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12 + 12}_{\text{drölf times}}$$

$$= 144 \text{ zened-zwölf. (But how to calculate this?)}$$
