For example, if you add
many big numbers:

Side calculations

$$
\begin{array}{r}
2819 \\
+\ \ 423 \\
+\ 1{,}04{,}1 \\
\hline
4283
\end{array}
$$

$9+3+1 = 12+1 = 13$

$1+2+4+1 = 3+4+1 = 7+1 = 8$

$8+4 = 12$

$2+1+1 = 4$

So, do you think this is easy?

I claim that you only find it easy because you are used
to the number system.

Let me prove it to you.

Introducing my own number system:
